

**2 Hours to Cure,
10 Years to Relax**

ACRYLICON®
Flooring Solutions

ABOUT ACRYLICON

AcryliCon is a leading manufacturer and worldwide installer of resin flooring systems with thousands of satisfied customers around the world including Heinz, Nestle, Pepsi, BMW, Shangri La and many others.

Established in 1977 by founder and still current CEO, Bjorn Hegstad, AcryliCon's independent laboratory tests scientifically prove it to be the strongest, longest lasting and most hygienic flooring system on the market.

Environmentally safe, non-toxic and easy to clean, AcryliCon is the obvious choice for quality industrial, commercial and retail flooring applications.

HOW ACRYLICON SAVES MONEY

LASTS LONGER

AcryliCon's installations from the 1970's are still looking great today. We offer a 10 Year Performance Warranty as well as a Lifetime Product Warranty. Proven real world life-expectancy is well over 20 years.

QUICK AND EASY TO INSTALL

Unlike other resin floors, which can take days or weeks to cure and become chemically resistant, AcryliCon takes under 2 hours - so you can get back to work on an AcryliCon floor almost immediately after installation.

HIGH COMPRESSIVE STRENGTH

AcryliCon has outstanding durability and cleanability - similar to Stainless Steel - which makes the floor easy to keep clean and less likely to mark or wear. Repairs and costly maintenance become a non-issue when using AcryliCon.

PERMANENT BOND

With each layer of the system chemically fusing together and our primer penetrating deep into the substrate, there is no risk of delamination – Other products only mechanically bond. Guaranteed.

HSE APPROVED SLIP-RESISTANCE

Keeping your staff safe and your company legal, AcryliCon keeps workplace safety a key priority.

HYGENIC

Food factories, dairies, pharmacies, kitchens and retail shops know how important it is to keep floors clean and avoid bad smells caused by bacteria. AcryliCon's unique ability to chemically bond and its non-porous nature saves time and money while helping our customers pass those critical audits.

INDUSTRIES WE HELP

Acrylicon is used in nearly every application- from hotels to hospitals, food factories to pharmacies, retail spaces to car garages, Acrylicon does just about everything a floor could possibly do!

Food & Beverage

For food safe flooring, choose an Acrylicon solution to remain fully compliant. Slip-resistant properties will also ensure that staff & customers remain safe.

Kitchen & Food Service

Both floor and wall hygiene approved resin flooring solutions are available to create a seamless finish, all of which are installed to guarantee full compliance with HSE guidelines.

Engineering & Electronics

For flooring applied over concrete surfaces, Acrylicon have solutions that are resistant to abrasion and scratching to improve longevity and holds up in the presence of oil, dirt and grease.

Retail

All Acrylicon flooring systems are manufactured with an advanced strengthening formula which allows surfaces to withstand a heavy footfall. Systems are equipped with slip-resistant properties to guarantee safety.

Pharmaceutical

Ensuring that you achieve maximum cleanliness while in the pharmaceutical industry is imperative. When opting for Acrylicon bespoke resin flooring solutions, clients can be assured of durability, cleanability and longevity.

Hospitals

With specific wall and decorative flake systems for use within hospitals, Acrylicon can provide ideal solutions that can be installed with minimum disruption to patients.

Supermarkets

Our decorative and colourful flooring solutions not only look fantastic but can handle the heavy footfall supermarkets endure day in day out. We can also carry out installation overnight to minimise downtime.

Public Spaces

From leisure centres and sports facilities to football stadiums and train stations, Acrylicon provides clients with bespoke resin flooring solutions individually manufactured to meet their requirements.

Car Garages

Keep your car dealership looking impeccable with a brand new floor from Acrylicon. With the ability to handle heavy loads and be resistant to oil, our resin flooring provides the ideal solution.

CUSTOMER REFERENCES

Our clients include established companies such as Nestle', Porsche, Starbucks, and Pepsi, as well as small butchers or bakery just around the corner.

Norway's Global Fish A.S. is one of the world's largest fish processors.

“Operating forklift trucks and 1400 kilo freezing steel containers severely impacts our floors. In the past, we spent some 5 million NOK on refurbishing the floors and on reapplications. At the time, AcryliCon was not included as a floor supplier we perceived it to be price prohibitive. However, today, we use AcryliCon exclusively due to that fact that its durability and impact resistance is far superior to other competing products.”

Jon Eikrem
Project Manager
Global Fish International AS

Tine, Midt-Norge in Norway produces cheese, milk and other dairy products and ensures heavy daily loads on its floors.

When calculating the costs of a new floor, downtime is a critical factor.

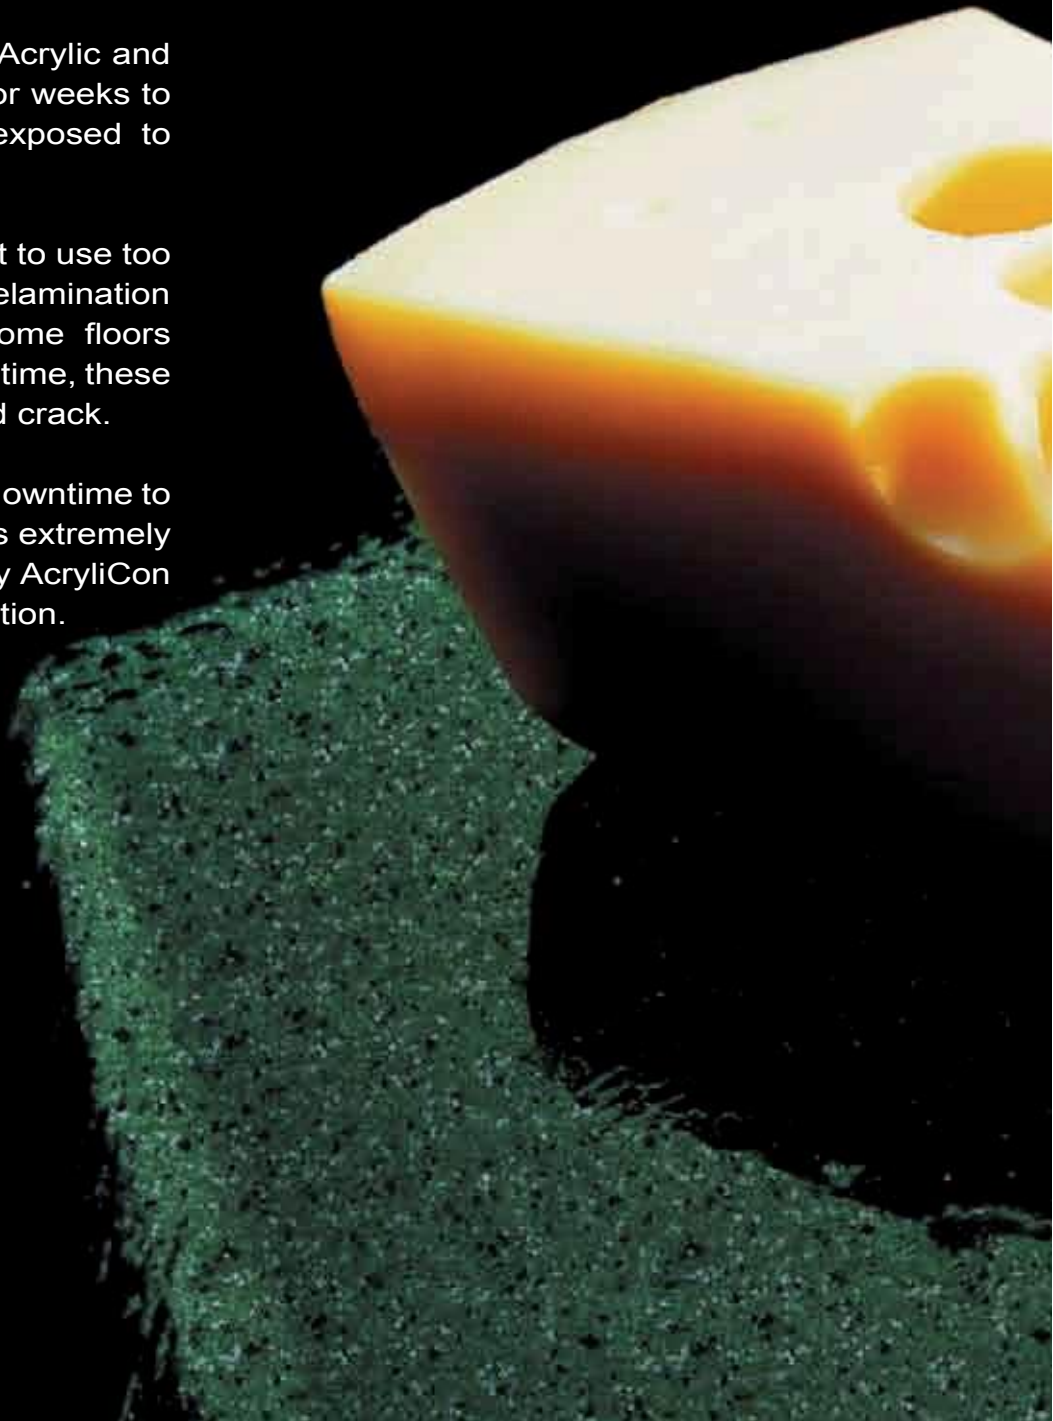

AcryliCon floors bring downtime to a minimum. The floor can be put to use almost immediately after it has been installed – without harming it.

Other resin floors including Acrylic and Polyurethane require days or weeks to cure before they can be exposed to normal loads.

When uncured floors are put to use too early, the result is often delamination and growth of bacteria. Some floors never cure completely. With time, these floors will become brittle and crack.

An AcryliCon floor reduces downtime to a minimum, cures fast and is extremely durable. Another reason why AcryliCon is the most cost-effective option.

“The floor could be used almost immediately after it had been installed...”

When Oyj Harwall Abp Brewery in Finland initiated the construction of their new brewery, their choice was AcryliCon

“...You cannot "gamble" with an 80,000 square metre floor, you must choose (AcryliCon) the best product”

“Oyj Hartwall Abp Breweries in Finland have tried and tested all available systems. AcryliCon has proven to be the most suitable for us even though the initial investment is more expensive than the alternatives.

Considering the 80,000 square meter project we were about to initiate, it was of the utmost importance that we received the best floor available, to avoid stoppages and delays in our production at a later stage. Choosing the right product and installation had to be our priority.

When considering the difficult conditions and our requirements of flooring, AcryliCon System Décor was the natural choice.

We now have a seamless, easy to clean floor, installed on a very tight schedule, which more than fulfils our quality demands. You simply cannot "gamble" with an 80.000 square meter floor, you must choose the best product, in spite of the price! "
